

# Handy Backup 8

## Handy Backup Server Network

**Handy Backup Server Network** is a reliable professional solution designed for automatic [centralized data backup](#), recovery, and data synchronization across a local network, tailored for corporate users.

Server Network solution conducts backups of network machines (physical or virtual) and can handle multiple local servers and workstations concurrently. Task management is centralized, operated from the network administrator's computer, eliminating the need to involve enterprise personnel in backup operations and optimizing time and machine resources necessary for data protection.

**Handy Backup Server Network** employs diverse Network Agents for managing both user data and servers.

# Handy Backup Server Network

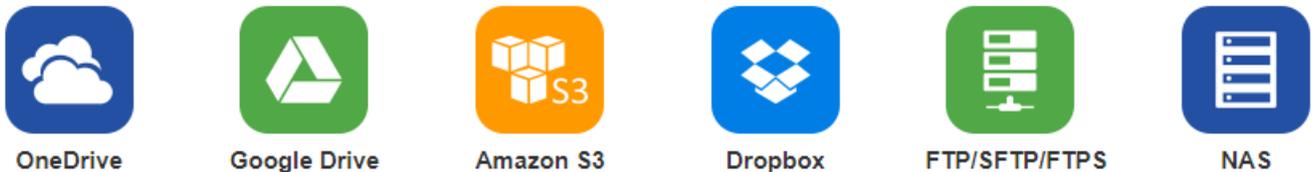

## Diverse Data Sources Coverage

- Server file, folder, document, and email replication
- Network-based backup for Hyper-V and VMware Workstation virtual machines
- Generation of bootable OS images
- Local data backup from networked computers
- [Hot database backup](#) of Oracle, MySQL, MariaDB, PostgreSQL, MS SQL databases, and ODBC-compliant databases

## Variety of Backup Storage Options

- USB devices, flash drives, memory cards, external hard drives
- Cloud platforms: Dropbox, Dropbox Business, Amazon S3, OneDrive, OneDrive for Business, Box and more
- Access to cloud services through S3 and WebDAV protocols
- FTP, SFTP, FTPS servers, NAS/SAN devices within the local network

## Backup Mode Management

- Preservation of data copies in their original format.
- Full, differential, incremental, and hybrid backup options.
- Retention of multiple versions of a dataset.
- Encryption of backup copies and compression of data into ZIP archives.
- Timestamp creation in directory names containing backups.

# Handy Backup Server Network

## Program Management Features

- Versatile task scheduling, including events like USB device connection and system logout
- Ability to run other programs before or after task execution
- [Reporting interface](#), logs, and email notifications for task completion
- Launching the program in a "silent" mode as a Windows service

## Program Highlights:

- User-friendly interface for easy operation
- Centralized task management across the local network for backup and recovery
- Hot backup support for servers and workstations without downtime
- Capability to replicate database data to remote servers
- Comprehensive functionality for ensuring data security within the enterprise network

Copying data across networks using the Server Network solution is as straightforward as backing up data from a single machine. With Handy Backup, you simply specify what, where, and when to copy, and the software handles the rest to safeguard your data.

**Handy Backup Server Network** is the optimal solution for backing up **Windows 11/10/8/7** and **Windows Server 2022/2019/2016/2012/2008**. Additionally, from the centralized Windows-based management panel, you can back up data from workstations running Ubuntu 22.04\*. The software provides reliable protection for corporate data on servers and network computers without requiring special knowledge for setup and use.

\*For information on backing up data from other Linux distributions, please reach out to us at [sales@handybackup.net](mailto:sales@handybackup.net).

**Download the unified distribution package of the software from [www.handybackup.net/download](http://www.handybackup.net/download).**

Experience our solution firsthand! Enjoy a 30-day free trial period with access to all program features!
