

Handy Backup 8

Handy Backup Small Business

Handy Backup Small Business is a fully functional, all-in-one solution for copying client and server data of any type from a single server or a workstation. It contains all standalone features of Handy Backup just out-of-the-box, and can fully automate server-level backup for a small business.

Why Handy Backup?

Native backup formats

Browse your backups without an effort just by opening a backup folder with some file-managing tool (e.g. Windows Explorer). You can delete, move, restore, copy or even edit any content of your backup dataset as a simple file or a folder, due to preserving native data formats.

Unified backup interface

Automate any backup task, including backing up mails, databases, websites, files, folders, documents and any other data type, with the unified GUI (graphical user interface) common for all tasks and solutions provided by Handy Backup. Simple and advanced modes for creating a new task.

Convenient restoration

Restore your data from backups automatically using Handy Backup restoration tasks, or pick and move files from backup folders in a manual mode. Both methods allow selecting a different place for restored data than an original backup location.

Features:

- All available plug-ins out of the box, including all tools from Standard and Professional editions
- Additional server-level data backup tools: MS SQL, MS Exchange, PostgreSQL, Oracle, IBM DB2, MySQL, MariaDB and Lotus Notes/Domino
- “Hot” backup of system and data drives without stopping any related processes
- Support for cloud services such as Dropbox, OneDrive, HBDrive, Box, [Amazon S3](#) and 4shared
- Data transferring via FTPS and SFTP secured protocols
- Backup types: [full backup](#), incremental backup, differential backup, mixed backup, mirroring data.

Handy Backup Small Server

Fast and simple data selection for backing up

- Database plug-ins MySQL, MariaDB, MS SQL, Oracle, MS Exchange, PostgreSQL, Lotus Notes.
- Unified backup tool for all ODBC-compatible databases
- Disk imaging and system recovery using a VHD drive image format
- Simplified copying of files, folders, Windows libraries and a registry
- [Backup for website](#) content via FTP, SFTP, FTPS and database plug-ins for dynamic content/CMS
- Quick searching and copying for documents such as Word, Excel, projects and photos
- Excluding files from backups by attributes (e.g. system and archive files)

A plenty of choices for storing backups

- External drives such as mapped network disks, USB and NAS units
- Local network servers and storages
- Remote FTP/SFTP/FTPS servers
- Cloud storages including Dropbox, Box, [HBDrive](#), S3- and WebDAV-driven clouds, Box, Google Drive and other

Controlling and reporting

- Scheduling backup tasks by precisely defined time or by some event occurred
- Running as Windows service, making no distraction for a user from a GUI
- Email notifications, [report windows](#) and extended task log
- ZIP compression and 128-bit encryption, protecting backups with a password
- Running other programs before and/or after executing a task
- Auto running a task when plugging a related USB drive to a PC
